

Electric auxiliary water pumps

Our wide range of electric auxiliary water pumps for all vehicle applications, from internal combustion engines through to electric drive systems, is a big help for workshops. The pumps also offer the handy benefit of coming complete with mounting and heat shield, whenever required by the model of engine at hand. This makes it easier for mechanics to replace pumps correctly. All of our water pumps are manufactured to the outstanding OE standards of quality for which we are renowned. And registered workshops benefit from our five-year guarantee on the pumps, too. We are also continually expanding our range of electrically adjustable primary water pumps for engine cooling. The relevant model applications can be found in the PIC: www.continental-ep.com/pic

Benefits

- > High quality to OE standards
- > Available for any type of drive system
- > Very smooth running and excellent durability thanks to high-quality integral bearings
- > Mechanical shaft seals made of carbon and silicon carbide for optimum sealing against leakage
- > All parts needed for assembly included
- > Five-year guarantee:
